

Approximate Multiplication and Squaring Circuits with Parallel Correction

Patricio Bulić¹, Jason Newman²

¹Faculty of Computer and Information Science
University of Ljubljana

²Faculty of Electrical Engineering
University of Suburbia

Approximate Multipliers and Squarers

P. Bulić, J.
Newman

Agenda

Introduction

▶ Motivation

Approximate
Multiplier

▶ Approximate Multiplier and Squarer

Hardware Im-
plementation

▶ Hardware Implementation

Error Analysis

▶ Error Analysis

Conclusions

▶ Conclusions

Approximate
Multipliers
and Squarers

P. Bulić, J.
Newman

Agenda

Introduction

Approximate
Multiplier

Hardware Im-
plementation

Error Analysis

Conclusions

- ▶ Implementation bla bla:
 - ▶ bla bla bla
 - ▶ higher performance at smaller power consumption

Approximate
Multipliers
and Squarers

P. Bulić, J.
Newman

Agenda

Introduction

Approximate
Multiplier

Hardware Im-
plementation

Error Analysis

Conclusions

- ▶ Implementation bla bla:
 - ▶ bla bla bla
 - ▶ higher performance at smaller power consumption
- ▶ Some beautiful chips:
 - ▶ noise and learning ability of analogue and digital designs
 - ▶ ASIC and FPGA (field programmable gate array)

Approximate
Multipliers
and Squarers

P. Bulić, J.
Newman

Agenda

Introduction

Approximate
Multiplier

Hardware Im-
plementation

Error Analysis

Conclusions

- ▶ Implementation bla bla:
 - ▶ bla bla bla
 - ▶ higher performance at smaller power consumption
- ▶ Some beautiful chips:
 - ▶ noise and learning ability of analogue and digital designs
 - ▶ ASIC and FPGA (field programmable gate array)
- ▶ Signal processing applications incorporate complex algorithms with many multiplications
 - ▶ Multiplication is area, power and time consuming operation
 - ▶ bla bla bla

Approximate Multipliers and Squarers

P. Bulić, J.
Newman

Agenda

Introduction

Approximate Multiplier

Hardware Im- plementation

Error Analysis

Conclusions

- ▶ An approximate multiplier, introduced by Babic et al. (2010):
 - ▶ Reduced usage of logic resources: one adder and a shifter
 - ▶ Reduced power consumption
- ▶ The product of the two numbers, N_1 and N_2

$$N_1 \cdot N_2 = (2^{k_1} + N_1^{(1)}) \cdot (2^{k_2} + N_2^{(1)})$$

- ▶ An approximate multiplier, introduced by Babic et al. (2010):
 - ▶ Reduced usage of logic resources: one adder and a shifter
 - ▶ Reduced power consumption
- ▶ The product of the two numbers, N_1 and N_2

$$\begin{aligned} N_1 \cdot N_2 &= (2^{k_1} + N_1^{(1)}) \cdot (2^{k_2} + N_2^{(1)}) \\ &= 2^{k_1+k_2} \end{aligned}$$

1. shift left the leading "1" from the first number by k_2 places

- ▶ An approximate multiplier, introduced by Babic et al. (2010):
 - ▶ Reduced usage of logic resources: one adder and a shifter
 - ▶ Reduced power consumption
- ▶ The product of the two numbers, N_1 and N_2

$$\begin{aligned}N_1 \cdot N_2 &= (2^{k_1} + N_1^{(1)}) \cdot (2^{k_2} + N_2^{(1)}) \\ &= 2^{k_1+k_2} + N_1^{(1)} \cdot 2^{k_2}\end{aligned}$$

1. shift left the leading "1" from the first number by k_2 places
2. shift left the first remainder by k_2 places

- ▶ An approximate multiplier, introduced by Babic et al. (2010):
 - ▶ Reduced usage of logic resources: one adder and a shifter
 - ▶ Reduced power consumption
- ▶ The product of the two numbers, N_1 and N_2

$$\begin{aligned}N_1 \cdot N_2 &= (2^{k_1} + N_1^{(1)}) \cdot (2^{k_2} + N_2^{(1)}) \\&= 2^{k_1+k_2} + N_1^{(1)} \cdot 2^{k_2} + N_2^{(1)} \cdot 2^{k_1}\end{aligned}$$

1. shift left the leading "1" from the first number by k_2 places
2. shift left the first remainder by k_2 places
3. shift left the second remainder by k_1 places

- ▶ An approximate multiplier, introduced by Babic et al. (2010):
 - ▶ Reduced usage of logic resources: one adder and a shifter
 - ▶ Reduced power consumption
- ▶ The product of the two numbers, N_1 and N_2

$$\begin{aligned} N_1 \cdot N_2 &= (2^{k_1} + N_1^{(1)}) \cdot (2^{k_2} + N_2^{(1)}) \\ &= 2^{k_1+k_2} + N_1^{(1)} \cdot 2^{k_2} + N_2^{(1)} \cdot 2^{k_1} + N_1^{(1)} \cdot N_2^{(1)} \end{aligned}$$

1. shift left the leading "1" from the first number by k_2 places
2. shift left the first remainder by k_2 places
3. shift left the second remainder by k_1 places
4. multiply the two remainders

- ▶ An approximate multiplier, introduced by Babic et al. (2010):
 - ▶ Reduced usage of logic resources: one adder and a shifter
 - ▶ Reduced power consumption
- ▶ The product of the two numbers, N_1 and N_2

$$\begin{aligned}
 N_1 \cdot N_2 &= (2^{k_1} + N_1^{(1)}) \cdot (2^{k_2} + N_2^{(1)}) \\
 &= 2^{k_1+k_2} + N_1^{(1)} \cdot 2^{k_2} + N_2^{(1)} \cdot 2^{k_1} + N_1^{(1)} \cdot N_2^{(1)}
 \end{aligned}$$

1. shift left the leading "1" from the first number by k_2 places
2. shift left the first remainder by k_2 places
3. shift left the second remainder by k_1 places
4. multiply the two remainders

Approximate Multipliers and Squarers

P. Bulić, J. Newman

Agenda

Introduction

Approximate Multiplier

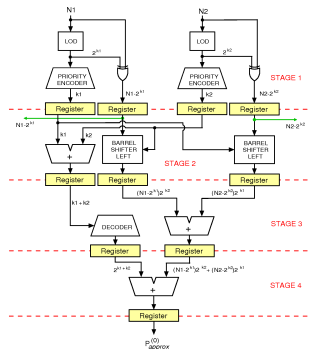

Hardware Implementation

Error Analysis

Conclusions

- A Basic block implements the approximate product

$$(N_1 \cdot N_2)_{approx} =$$

Approximate Multipliers and Squarers

Newman

Agenda

Introduction

Approximate
Multiplier

Hardware Im-
plementation

Error Analysis

Conclusions

Theorem

The probability of an error in the circuit is directly proportional to the trouble it can cause.

Agenda

Introduction

Approximate
Multiplier

Hardware Im-
plementation

Error Analysis

Conclusions

Theorem

The probability of an error in the circuit is directly proportional to the trouble it can cause.

Proof.

The proof is straightforward. □

Approximate Multipliers and Squarers

Newman

Agenda

Introduction

Approximate Multiplier

Hardware Im- plementation

Error Analysis

Conclusions

Figure: The l-o-n-g caption for all the subfigures (FirstFigure through FourthFigure) goes here.

Approximate
Multipliers
and Squarers

P. Bulić, J.
Newman

Agenda

Introduction

Approximate
Multiplier

Hardware Im-
plementation

Error Analysis

Conclusions

- ▶ The proposed approach improves the average and maximum relative errors compared to the existing square approximations.

Approximate Multipliers and Squarers

P. Bulić, J.
Newman

Agenda

Introduction

Approximate Multiplier

Hardware Im- plementation

Error Analysis

Conclusions

- ▶ The proposed approach improves the average and maximum relative errors compared to the existing square approximations.
- ▶ Error analysis has shown that an error in the circuit is directly proportional to the trouble it can cause.

Approximate Multipliers and Squarers

P. Bulić, J.
Newman

Agenda

Introduction

Approximate Multiplier

Hardware Im- plementation

Error Analysis

Conclusions

- ▶ The proposed approach improves the average and maximum relative errors compared to the existing square approximations.
- ▶ Error analysis has shown that an error in the circuit is directly proportional to the trouble it can cause.
- ▶ We can calculate the correction terms in parallel.
